

Assistive Technology Collection

Provide Support through Video Tutorials

Do you need to find a better way to provide training on Assistive Technology products to the people you serve? Atomic Learning's Assistive Technology Collection can help by bringing training to people whenever and wherever they need it in the form of short, 1-3 minute, online video tutorials. The collection contains over 5,000 tutorials on common assistive technology software and hardware, such as Boardmaker Plus, Read:OutLoud, Kurzweil 3000, Dragon Naturally Speaking, ClassMate Reader, Dynavox, Intellikeys, and the NEO portable word processor. The Assistive Technology Collection even covers accessibility features that are built into Windows and Mac operating systems.

Provide Customized Training Paths

Not everyone needs to learn the same AT tools or the same features of tools. With the ability to assign training you can give your speech therapists one set of training and your teachers for students with learning disabilities another set of training. You can also specify paths for individual students and the students IEP team members, including parents and paraprofessionals.

Maintain Records through an ePortfolio

The ePortfolio can be used to store information on what was learned when watching the tutorials. This can be done through a document like our Evidence of Learning Worksheet or documentation using technology with a student or students. This can also be a place to store student work samples comparing work using AT and not using AT and tracking the progress a student makes as AT is implemented.

Upload and Assign your own Training

Do you have training around IEP management systems that you need to distribute and track who has viewed it? Do you have forms that you use when conducting AT trials or checking out equipment to teachers? With the custom upload tool you can upload training, information, or forms to Atomic Learning and then assign it out to people, keeping track of who has viewed the material and who hasn't.

Packages and Descriptions

Assistive Tech Professional Development Custom Package

Atomic Learning's Assistive Tech Professional Development Custom Package provides a centralized resource for training and professional development resources. This solution empowers educators to use and apply assistive technology, and includes specialized tools for professional development and the ability to upload custom training resources.

- Ability to upload your own custom training
- Just-in-time training on software accessibility training, assistive technology software and devices
- Evidence of Learning worksheet for training reflection and implementation planning
- Reports to monitor progress and track user activity
- Administrators tools to assign or recommend training to individuals or groups
- Sharing tools to quickly and easily integrate resources into any document or Web page
- Facilitated Blended Professional Development courses available

Examples of tutorials: Boardmaker Plus, Jaws, Co:Writer, Intellitools Classroom Suite, Dragon Naturally Speaking, iPad, as well as accessibility features built into Windows and Mac platforms.

Assistive Tech Support Package

Atomic Learning's Assistive Tech Support Package includes access to Atomic Learning's collection of assistive technology training tutorials, site search functionality, and activity reports—empowering educators to use and apply assistive technology.

- Just-in-time training on software accessibility training, assistive technology software and devices
- Reports to monitor user activity and implementation
- Sharing tools to quickly and easily integrate resources into any document or Web page
- Facilitated Blended Professional Development courses available

Examples of tutorials: Boardmaker Plus, Jaws, Co:Writer, Intellitools Classroom Suite, Dragon Naturally Speaking, iPad, as well as accessibility features built into Windows and Mac platforms.
